This course, and the creatment of neophastic disease of the CNS e.g. glioma, glioblastoma, medulloblastoma, craniophastrogen, cpendyoma, pinealoma, paemangioblastoma, acoustic neuroma, coligodendroglioma, menagioma, medulloblastoma and degenerative perve diseases e.g. Alzheimer's and Parkinson's diseases.

Cligodendroglioma, menagioma, neuroblastoma or retinoblastoma and degenerative or benign dysproliferative disorders e.g. psoriasis and tissue hypertrophy. Ribozymes or antisense Nogo nucleic acids can be used to inhibit production of Nogo protein to induce regeneration of neurons or to promote structural plasticity of the CNS in disorders where neurons or to promote structural plasticity of the CNS in disorders where neurons or to promote structural plasticity of the CNS in disorders where neurons or to promote structural plasticity of the CNS in disorders where neurons or to promote structural plasticity of the CNS in disorders where animal models can be used in diagnostic and screening methods for predisposition to disorders and to screen for or test molecules which can tract or prevent disorders or diseases of the CNS. The present sequence is derived by fusing two fragments of rat Nogo A protein shown in AAY1310. The fragment is used in the construction of mutant Nogo-B. The mutant is composed of His-tagy/rector/Nogo-A sequence an 1-171 + 575-162. Nogo protein. Major inhibitory region was identified in the Nogo attes of Nogo protein. Major inhibitory region was identified in the Asequence from amino acids 172-974, particularly amino acids 542-722. In addition, N-terminal region 1-171 was found to be inhibitory to NHH 373 fibroblast spreading. Note: The present sequence is not given in the SEQ ID numbers 35-42 are referred in claim 32 and SEQ ID NO; 29 in include sequences for these SEQ ID numbers
   patent relates to neurite growth inhibitor Nogo which is free of all
                                     central nervous system (CNS) myelin material with which it is natively associated. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of

degenerative nerve disease; Alzheimer's disease; Parkinson's disease; ypperproliferative disorder; benign dysproliferative disorder; diagnosis; psoriasis; tissue hypertrophy; neuronal regeneration; treatment; structural plasticity; screening. The present sequence is a rat Nogo B protein which is a potent neural cell growth inhibitor and is free of all central nervous system (CNS) melin material with which it is natively associated. The Nogo B transcript arises as a result of alternative splicing of Nogo gene. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, allohastoma, medulloblastoma, craniopharyngioma, ependyoma, pinealoma, haemangioblastoma, acoustic neuroma, oligodendroglioma, menagioma, neuroblastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases. Therapeutics which promote Nogo activity can be used to treat or prevent hyperproliferative or benign dysproliferative disorders e.g. psoriasis and tissue hypertrophy. Nogo proteins and nucleic acids useful for treating neoplastic disorders of the central nervous system and inducing regeneration of neurons. /note= "Corresponds to C-terminal 188 amino acids (residues 976-1163) of Nogo A protein (AAY71310). This region is common to Nogo A, B and C isoforms" 185. .220

Discognize to description of the CNS in disorders where neurite production of Nogo protein to induce regeneration of neurons or to promote structural plasticity of the CNS in disorders where neurite growth, regeneration or maintenance are deficient or desired. The animal models can be used in disquosted screening methods for predisposition to disorders and to screen for or test molecules which can treat or prevent disorders or diseases of the CNS. Note: The present sequence is not given in the specification but is derived from Nogo A protein sequence (AAY71310) and corresponds to residues 1-172 fused to 976-1163 of Nogo A. The specification claims an alternative version of this sequence (see AAY71385.) which corresponds to residues 1-172 fused to 975-1163 of Nogo A. SEQ ID numbers 35-42 are referred in claim 32 and SEQ ID NO: 29 in disclosure of the specification. However the specification does
   acids can be used to inhibit

The invention relates to promoting nerve regeneration or conferring neuroprotection and preventing or inhibiting neuronal degeneration in the central/peripheral nervous system (NS). The method involves administering NS-specific antigen, its analogue or its peptide, a nucleotide sequence the NS-specific antigen or its analogue or combinations. The method is useful for promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system from injury/disease, where the injury is spinal cord injury, blunt crown injury/disease, where the injury is spinal cord injury, blunt crown injury/disease, where the injury is spinal cord injury, blunt crown injury/disease, where the injury is spinal cord injury, blunt crown injury/disease, where the injury is spinal cord injury, blunt crown injury/disease, where the injury is spinal cord injury, blunt crown injury/disease or neoplasm. The disease results in a degenerative crown injury/disease or neoplasm. The disease is not an autoimmune disease or neoplasm. The disease is not autoimmune disease or neoplasm. The disease is not autoinfury in either gray or white matter or both. The disease is disease, facial nerve (Bell's) play, glaucoma, Huntington's chorea, amyotrophic lateral sclerosis, non-arteritic optic neuropathy, and vitamin deficiency, intervertebral disc herniation, prion diseases such as Creutzfeldt-Jakob disease, carpal tunnel syndrome, peripheral creuropathy, chronic ataxic neuropathy, inland, postution or organophosphates), charcot-Marie-Tooth disease, ataxia anyloidosis, obstructive lung diseases, acromegaly, malabsorption creample of various drugs are cromegaly, malabsorption creample of various drugs (e.g., metronidazole) and toxins (e.g., alcohol or organophosphates), Charcot-Marie-Tooth disease, rebries, complications of various drugs (e.g., metronidazole) and toxing disease, or lipoproteinenia. The present sequence represents the rat

The present sequence is an alternative version of rat Nogo B protein
which is a potent neural cell growth inhibitor and is free of all central
cc which is a potent neural cell growth inhibitor and is free of all central
cc nervous system (CNS) myelin material with which it is natively
cassociated. The Nogo B transcript arises as a result of alternative
splicing of Nogo gene. Nogo proteins and fragments displaying neurite
cc growth inhibitory activity are used in the treatment of neoplastic
cdisease of the CNS e.g. glioma, glioblastoma, medulloblastoma, acoustic
crennopharyngioma, ependyoma, pinealoma, haemangioblastoma, acoustic
crentoma, oligodendroglioma, menagioma, neuroblastoma, acoustic
cc neuroma, oligodendroglioma, menagioma, neuroblastoma or retinoblastoma
and degenerative nerve diseases e.g. Alzheimer's and Parkinson's
cc diseases. Therapeutics which promote Nogo activity can be used to treat
cc or prevent hyperproliferative or benign dysproliferative disorders e.g.
cp coriasis and tissue hypertrophy. Nibozymes or antisense Nogo nucleic
cor prevent hypertrophy production of Nogo protein to induce
cc acids can be used to inhibit production of Nogo protein to induce
cc desired. The animal models can be used in diagnostic and screening
cor desired. The animal models can be used in diagnostic and screening
cc desired from Nogo A protein sequence (AAY71310) and corresponds to
cresidues 1-172 fused to 975-1163 of Nogo A. This sequence is an
creamed from Nogo B sequence (see AAY71383) described in
calternative version of the Nogo B sequence (see AAY71383) described in
calds (residues 976-1163) of Nogo A. SEQ ID numbers 35-42 are referred in
claim 32 and SEQ ID No; 29 in disclosure of the specification. However
cc the specification does not include sequences for these SEQ ID numbers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        179

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Use of gene sequence that is down-regulated in response to streptozocin-
induced diabetes, vector, host cell, animal, polypeptide and antibody, in
screening of compounds for treating or diagnosing pain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           regulated in the spinal cord in response to streptozocin-induced diabetes, or comprising, hybridising or having at least 80% sequence by the sequence whose expression products are kinases, phosphatases, ion channel proteins, receptors, transporters, G-protein coupled receptor proteins, DNA-binding proteins, proteases or enzymes, given in the specification. A gene of the invention has analgesic activity, and may have a use in gene therapy. The gene sequences, vector, host cell, animal, polypeptide and antibody are useful for screening of compounds for diagnosing or treating pain. The kits are useful for simultaneous, separate or sequential detecting and/or quantifying downergulation of a gene sequence in the spinal cord of a mammal in response to streptozocin-induced diabetes. The present sequence is a rat Nogo A protein which is a potent neural cell growth inhibitor and is free of all central nervous system (CNS) wyelin material with which it is natively associated. The protein was derived from a cDNA generated by fusing R018037-3, R1-3021 cDNAs isolated from hexanucleotides-primed rat brain stem/spinal cord library, and Oli18 comparation oligo d(T)-primed rat oligodendrocyte library. Nogo proteins and fragments displaying neutre growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, glioblastoma, cranipharyngioma, ependyoma, pinelona, menagioma, haemangioblastoma, cranipharyngioma, oligodendroglioma, menagioma, chamangioblastoma or retinoblastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases. Therapeutics which promote Nogo activity can be used to treat or prevent hyperproliferative or benign dysproliferative disorders e.g. psoriasis and tissue hypertrophy. Ribozymes or antisense Nogo nucleic acids can be used to inhibit production of Nogo protein to induce regentation of neurons or to production of Nogo protein to induce regentation of neurons or to product can be used in diseases of the CNS in disorders where neurite growth, regeneration or maintenance are deficient or desired. The animal models can be used in diseases of the CNS in the sequence squence of esignated as SEQ ID NO: 2 is stated to be the same as the sequence of designated as SEQ ID NO: 2 is stated to be the same as the sequence of efferted in claim 32 and SEQ ID NO: 29 in disclosure of the sequence for the sequence given in Fig. 13 (see AAY71384) of the specification does not include sequences for the second of the sequence of the second of the sequence of the second of the sequence of the second of the sequence of the second of the sequence of the second of the sequence of the second of the sequence of the second of the sequence of the second of the sequence of the second of the second of the sequence of the second of the second of the second o

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present sequence is an alternative version of rat Nogo A protein which is a potent neural cell growth inhibitor and is free of all central nervous system (CNS) myelin material with which it is natively associated. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, haemangioblastcoma, caniopharyngioma, cpendyoma, pinealoma, haemangioblastcoma, coustic neuroma, clionaciona, haemangioblastcoma or retinoblastcoma and capenarative nerve diseases e.g. Alzheimer's and Parkinson's diseases. Therapeutics which promote Nogo activity can be used to treat or prevent hyperproliferative or benign dysproliferative disorders e.g. psoriasis and tiseale hypertrophy. Ribozymes or antisense Nogo nucleic acids can be used to inhibit production of Nogo protein to induce regeneration of neurons or to promote structural plasticity of the CNS in disorders where neurons or to promote structural plasticity of the CNS in disorders where on inhibit respectation or maintenance are deficient or desired. The animal models can be used in diagnostic and screening methods for predisposition to disorders and to screen for or test molecules which can cape or prevent disorders and to screen for or test molecules which can be used in diagnostic and screening methods for creat or prevent disorders and to screen for or test molecules which can be an alternative version of the Nogo A sequence shown in Fig. 20 (see AAY71310). SEQ ID numbers 35-42 are referred in claim 32 and 52 and 
                                                                                                ď
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Nogo proteins and nucleic acids useful for treating neoplastic disorders of the central nervous system and inducing regeneration of neurons.

```
The invention relates to promoting nerve regeneration or conferring neuroprotection and preventing or inhibiting neuronal degeneration in the central/peripheral nervous system (NS). The method involves administering NS-specific antigen, its analogue or its peptide, a nucleotide sequence the NS-specific antigen or its analogue or combinations. The method is useful for promoting nerve regeneration and preventing neuronal degeneration in central/peripheral nervous system from injury/disease, where the injury is spinal cord injury, blunt frauma, penetrating trauma, hemorrhagic stroke, ischaemic stroke or damages caused by surgery such as tumour excision. The disease is not autoimmune disease or neoplasm. The disease results in a degenerative concimmune disease or neoplasm. The disease results in a degenerative cliabetic neuropathy, senile dementia, Alzheimer's disease, Parkinson's disease, facial nerve (Bell's) palsy, glaucoma, Huntington's chorea, amyotrophic lateral sclerosis, non-arteritic optic neuropathy, and vitamin deficiency, intervertebral diseases, including but not limited neuropathies associated with various diseases, including but not limited

New isolated truncated Nogo-A polypeptide that corresponds to a truncated form of the Nogo-A protein, useful for identifying a compound having detectable affinity to a Nogo-A protein.	Claim 1; Fig 6A; 80pp; English.	The present invention relates to an isolated truncated Nogo-A polypeptide	CC that corresponds to a truncated form of the Nogo-A protein from the rat CC and from the human. The truncated polypeptide is useful for identifying a CC compound having detectable affinity to a Nogo-A protein. The present	sequence is a Nogo-A polypeptide of the invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention describes a binding molecule which binds to human NogoA polypeptide, human NiG, human NiG-D20 or human NogoA 623-640 with a dissociation constant of less than 1000nM. Also described: (1) a polynucleotide encoding the binding molecule; (2) an expression vector or system comprising the polynucleotide; (3) a host cell comprising the binding molecule and a carrier or diluent; and (5) treating the binding molecule and a carrier or diluent; and (5) treating diseases associated with nerve repair. The binding molecule has neuroprotective activity, and can be used in gene therapy. The binding molecule is useful in preparing a composition for treating central nervous system (CNS) injury or neurodegenerative disorders. The present sequence represents rat NogoA, which is used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New binding molecule that binds to the human NogoA polypeptide, NiG, NiG-D20 or NogoA623-640, useful in preparing a composition for treating CNS injury or neurodegenerative disorders.

Nogo proteins and nucleic acids useful for treating neoplastic disorders of the central nervous system and inducing regeneration of neurons.

Example; Page; 122pp; English.

The patent relates to neurite growth inhibitor Nogo which is free of all central nervous system (CNS) myelin material with which it is natively central nervous system (CNS) myelin material with which it is natively central nervous system (CNS) myelin material with which it is natively cansociated. Nogo proteins and fragments displaying neurite growth inhibitory activity are used in the treatment of neoplastic disease of the CNS e.g. glioma, haemangloblastoma, acoustic neuroma, coligodendroglioma, nenagioma, neuroblastoma or retinoblastoma and degenerative nerve diseases e.g. Alzheimer's and Parkinson's diseases.

CC Therapeutics which promote Nogo activity can be used to treat or prevent hypertrophy. Ribozymes or antisense Nogo nucleic acids can be used to inhibit production of Nogo protein to induce regeneration of neurons or to promote structural plasticity of the CNS in disorders where constructing growth, regeneration or maintenance are deficient or desired. The neurite growth, regeneration or maintenance are deficient or desired. The animal models can be used in diagnostic and screening methods for prevent disorders or diseases of the CNS. The present sequence treat or prevent disorders or diseases of the CNS. The present sequence creation of matent Nogo-A sequence from animo acids 172-974, cased for mapping the inhibitory sites of Nogo protein. Major inhibitory credion was identified in the Nogo A sequence from amino acids 542-722. In addition, N. terminal region 1-171 was found to be inhibitory to NIH 373 fibroblast spreading. Note: The was found to be inhibitory to NIH 373 fibroblast spreading. Note: The was found to be inhibitory to NIH 373 fibroblast spreading. Note: The Numbers and Sequence shown in AAY1310. SEQ ID numbers 35-42 are referred in claim 32 and SEQ ID NO: 29 in disclosure of the specification.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Regenerating nerves or modulating nerve regeneration comprises inhibiting or modulating p75 signal transduction pathway by administering a transduction agent, e.g. p21 or Rho, or an agent that interacts with the transduction agent.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PAAGLSAAAVPPAAAAPLLDFSSDSVPPAPRGPLPAAPPAAPERQPSWERSPAAPAEL 120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention relates to a method for regenerating nerves or modulating nerve regeneration. The method involves inhibiting or modulating a p75 signal transduction pathway. The invention is useful for treating, preventing or diagnosing neurological diseases based on nerve regeneration and for identifying agents useful for nerve regeneration. The invention is also useful in gene therapy and for preparing vaccine. The present sequence is the Mus musculus Nogo protein. Note: This sequence is said to encoded by SEQ ID NO 9, however this does not appear
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method of identifying compounds that influence fat cell number or size comprising providing a cell that expresses a gene and an agent, exposing the cell to the agent and identifying fat cell number or size relative to cells not exposed to the agent. The method also comprises providing an expression vector and an agent, exposing the vector to the agent, detecting a charge in expression of the gene relative to expression of the gene in an expression of the gene crative to expression of the agent and agent, treating a subject with the agent and identifying fat cell number or size in the subject with the agent comprises an antistense chigonucleotide. The subject comprises a manishan and agent, exposing the polypeptide to the agent, detecting binding of the agent to the gubject with the agent and identifying fat cell number or size in the subject. The agent and identifying fat cell number or size in the subject. The agent and identifying fat cell number or size in the subject. The agent and identifying the method of regulating fat cell number or size in the subject. The agent and identifying the method of regulating fat cell number or size in the subject. The agent and identifying the method of regulating fat cell number or size in the subject. The agent and adentifying the method of regulating fat cell number or size in the subject. The agent and adentifying the method of regulating fat cell number or size in the subject.

cell differentiation activity (either inducing or inhibiting). They can be used to support colony forming cells or factor-dependent cell lines, to requiste hematopoissis, and to treat myeloid or lymphoid cell inse, to requiste hematopoissis, and to treat myeloid or lymphoid cell lines, to requiste hematopoissis, and to treat myeloid or lymphoid cell lines, to requiste hematopoissis, and to treat myeloid cell such as proliferation of erythroid progenitor cells, and to treat various anaemias. They can have colony stimulating factor (GSF) activity and can be used to support the growth and proliferation of myeloid cells such as granulocytes, monocytes or macrophages, to prevent or treat myelocoupport to support the growth and proliferation of myeloid cells such as and platelets, thereby allowing prevention or treatment of platelet conjunction with platelet transfusions, to treat stem cell disorders, conjunction with platelet transfusions, to treat stem cell disorders, such as aplastic anaemia and parcysmal nocurnal hemoglobinuria, or to repopulate the stem cell compartment after irradiation or chemotherapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     They can be used for growth or differentiation of bone, cartilage, tendon, ligament, or nerve tissue, as well as for wound healing and tissue repair and replacement, and in the treatment of burns, incisions and ulcers, to induce cartilage and/or bone growth in circumstances where bone is not normally formed and thus have an application in healing bone
                                                                                                                                                                                                                                                                                  AAY53622-43 represent bone marrow secreted proteins of human bone marrow
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              fractures and cartilage damage or defects, prophylactic use in fracture reduction and also in the improved fixation of artificial joints
                                                                                                                                                                                                                            Claim 2; Page 74; 120pp; English

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      SLKFAVLMWVFTYVGALFNGLTLLILALISLFSIPVIYERHQVQIDHYLGLANKSVKDAM 345
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to human MAGI protein, which is similar to neuroendocrine-specific protein. The MAGI protein can be expressed by standard recombinant methodology. The MAGI polypeptides, polynucleotides and antibodies are useful for treating diseases, including neuropathies, spinal injury, neuronal degeneration, neuromuscular disorders, psychiatric disorders and developmental disorders, cancer, stroke and inflammatory disorders. The polynucleoitde is also useful for chromosome localization and for tissue expression studies. The present sequence represents the human MAGI protein variant
                                                                                                                                                                                                                                                                                    9

similarity).
SUBCELLULAR LOCATION: Integral membrane protein. Anchored to the membrane of the endoplasmic reticulum through 2 putative transmembrane domains (By similarity).

Event-Alternative splicing; Named isoforms=4; Name=1; Synonyms=Nogo-A, NI-220-250;

ALTERNATIVE PRODUCTS

-

similarity). -1- SUBUNIT: Binds to RTN4R. Interacts with Bcl-xl and Bcl-2

          Name=2; Synonyms=Nogo-B, Foocen-M1; Isold=09JKI1-2; Sequence=VSP_005658; Name=3; Synonyms=Nogo-C, VP20; Isold=09JKI1-2; Sequence=VSP_005656, VSP_005657; Name=4; Synonyms=Poocen-M2; Isold=09JKI1-4; Sequence=VSP_005659; are present in optic nerve, spinal cord and cerebral cortex. Isoforms 1 and 2 are present in dorsal root ganglion, sciatic nerve and PC12 cells after Longer exposure. Isoforms 2 and 3 are detected in kidney, cartilage, skin, lung and spleen. Isoform 3 is expressed at high level in skeletal muscle. In adult animals isoform 1 is expressed mainly in the nervous system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         120
